IEG PI NOTICE

No. 22-77

TITLE/SIGNIFICANCE:

Recognition features of the DDA-53C Decontamination Truck (GAZ-66)

COMMENT: The DDA-53C consists of the standard DDA shower units mounted on a GAZ-66 truck chassis. The twin chambers, a key recognition feature on the DDA-53A, are not as prominent on the DDA-53C. The key P.I. feature for the DDA-53C is the raised water heating apparatus located between the truck cab and the twin chambers. This area is very prominent on the DDA-53C and is usually canvas covered. There is also a small space between the cab and the water heating apparatus.
